

Ahmed Abuelgasim | Senior Software Engineer

Product-focused engineer delivering sophisticated and performant digital products for over 10 years. Skilled at solving complex technical challenges on impactful projects, mainly for Google, with a strong emphasis on UX, quality and accessibility. Expert in React and TypeScript, with solid backend experience in Node.js and Python. Collaborative team player and mentor, known for exceptional attention to detail and clear communication.

Accessible Custom Elements (ACE) library

- At Potato, identified recurring need for fully accessible components and developed **ACE**, an open-source UI component library built specifically for assistive technology users.
- Led a team to build and drive adoption across high-impact Google and Potato products.
- Created dynamic documentation using Node.js and CI/CD that renders a component alongside its latest code, for side-by-side preview and seamless developer integration.

Work experience

Senior Software Engineer | Bitpanda

Sep 2025 - Present | Remote

- Integral contributor to ongoing web platform rebuild using React, Next.js, Apollo and GraphQL, handling real-time market and portfolio data at scale on a 7M+ user platform.
- Introduced limit order trading, extending the trade flow with a validated form, and built a route to present limit orders in a filterable, infinite scroll table with management actions.
- Delivered real stock trading by owning the adaptation of the Asset Detail Page to support the new asset type, driving increased usage, engagement and revenue opportunities.

Senior Software Engineer | Workiva

Oct 2023 - Mar 2025 | Remote

- Converted user dashboard Dart components to a React and TypeScript microfrontend architecture, applied new design system and improved performance and test coverage.
- Developed and maintained React component library aligned with Workiva UI standards, providing JSON-configurable components for rapid, customisable no-code UI solutions.
- Created Node.js templating tool to generate new component schemas and boilerplate.

Senior Frontend Engineer | Google

Mar 2021 - Sep 2022 | Remote

- Joined a Google product team to lead key front-end development efforts on Angular app for content creators to build customisable web storefronts and sell digital products.
- Developed multifaceted admin dashboard with dynamic, interactive data visualisations and real-time analytics, showcasing engagement, sales and other key business metrics.

Senior Frontend Engineer | Potato

Oct 2017 - Mar 2023 | London, UK & Remote

- Core contributor on cross-functional teams delivering multiple digital products almost exclusively for Google, collaborating closely with UX designers and backend engineers.
- Architected and led front-end build of Angular app for Google Ads, enabling clients to assess digital marketing maturity and receive tailored service suggestions. Scaled after launch to support News, Retail and Cloud teams with custom designs and assessments.
- Assessed AngularJS alternatives prior to end-of-life for two major projects, authored technical specifications and led refactoring to enhance security and maintainability.
- As part of Quality Guild, created GitLab CI/CD templates to automate Firebase or Google Cloud deployments and Lighthouse performance audits, improving release reliability.
- As part of Accessibility Guild, led accessibility audits across multiple projects applying expert knowledge to implement improvements, achieving perfect Lighthouse scores.
